Global presence

Multi-sector experience
Some of our references

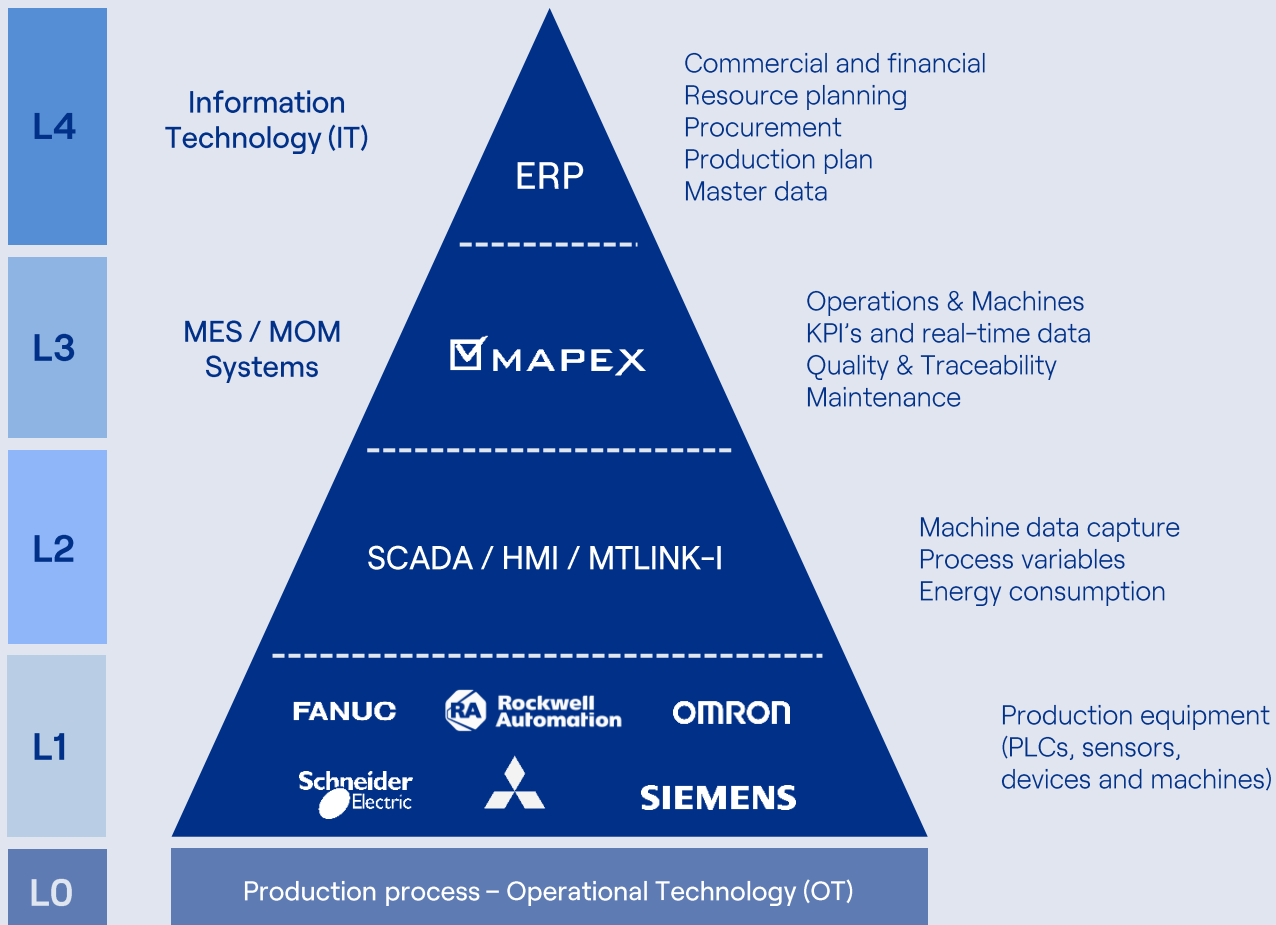

Digital transformation 4.0 process

Smart factories are based on the introduction of digital technologies in manufacturing processes by automating plant operations, digitizing the capture of information and controlling KPI's.

Vertical integration

Connecting technology, processes and people through a single network that links IT with OT.

Mapex Platform

Modules

Benefits of using a Manufacturing Execution System (MES)

More sustainable company: paperless factory

Productivity: 10% increase in Efficiency (OEE) & Productivity

Quality improvement and regulatory compliance

Successful maintenance management

Reliable data capture in real time

Faster and better decision-making

We want to be part of your digital transformation process.
