Programa PirosLIFE Catalunya

per la consolidació d'una població d'òssos
als Pirineus centrals

Objectius

L'**objectiu general** del projecte és implementar una sèrie d'accions que permetin consolidar el futur de l'ós bru als Pirineus en un entorn favorable i, generar productes i sistemes per a ser exportats a la resta del Pirineu (aragonès, navarrès, andorrà i francès) i a altres zones de la Unió Europea.

Objectius específics

1. Conèixer i consolidar genèticament la població.
2. Dissenyar una xarxa d'espais de connectivitat per l'ós bru i millorar-los.
3. Provar que el risc d'atacs "zero" a la ramaderia i l'apicultura és possible.
4. Generar un clima d'acceptació i coexistència.
5. Incrementar i millorar els espais de coordinació internacional en relació a l'ós bru.

LIFE

HOUSEFUL

Innovative circular solutions and services for the housing sector

At EU level, the housing sector is responsible for 9% of GDP, but it also uses 50% of the extracted materials, 40% and 30% of available energy and water respectively, aside from causing 30% of total waste and 35% of green-house gas emissions. No doubt that actions like HOUSEFUL are needed.

EAT:LIFE on LIFE Public Database

Eat, Act, Impact: Empowering and sensitizing the educational sector in Catalonia, Spain and Europe for a fairer, healthier and more environmentally friendly food system, thanks to the LIFE programme

Reference: LIFE20 NGO4GD/ES/000023 | Acronym: EAT:LIFE

PROJECT DESCRIPTION

BACKGROUND

The existing food system is one of the leading causes of environmental degradation and climate change. Agriculture emits around 10% of the EU's greenhouse gases (GHG), contributes to deforestation, biodiversity loss, antimicrobial resistance, pollution, soil degradation, etc. Although citizens are worried about these problems, there is a gap between their concern and their action, particularly when it comes to food. For example, in a Special Eurobarometer report (501) 94% of Spaniards believed that climate change is a very/fairly serious problem, but only 13% have adopted a more sustainable diet (at EU level 81% and 19%, respectively). Similarly, at Catalan level 90% of the population is worried about climate change, but only 1% opts for ecological products or consumes responsibly (Study on environmental perception and habits, 2019). This also shows that it is not clear to citizens in Catalonia (7.6 million people, 70% of them in the metropolitan area of Barcelona) or in Spain generally that food systems contribute greatly to climate change and that modifying one's diet is an effective way of taking action.

OBJECTIVES

The EAT:LIFE project seeks to transform the food consumption patterns of citizens in Catalonia, and also more widely in Spain and Europe, towards more sustainable, fair and healthy diets.

The specific objectives are:

1. Promote a sense of urgency;

Life EBRO ADMICLIM

Evaluating the Ebro Delta areas vulnerable to subsidence and sea level rise

The Ebro Delta is one of the most vulnerable areas to climate change of Catalonia. Its coastal regression (caused by the reduction of the river sedimentary contribution as a consequence of the dam sediment retention within the Ebro watershed), the progressive sea level rise and the subsidence processes, compromise the sustainable development of this area of great environmental importance.

Ebro Delta flooding simulations

Flood simulation of the Ebro Delta based on subsidence velocity analysis, integrated with the IPCC estimate for a sea level rise of the RCP 4.5 (~6mm/year), represented on the high resolution terrain elevation model of the ICGC. The red zones correspond to areas that are below sea level.

The EBRO-ADMICLIM project proposes a set of measures aimed to determine the present delta status, predict its environmental evolution and implement adaptation pilot actions to cope with climate change.

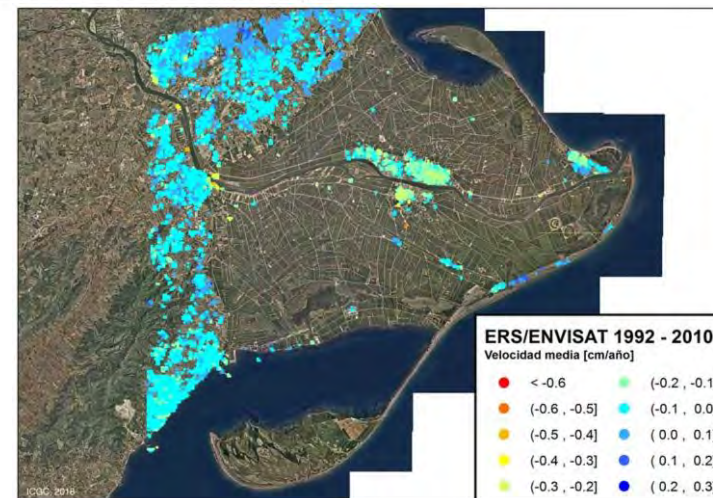

The project evaluates the recent historical subsidence distribution within the delta plain area. This task is developed considering the movements on surface as well as the delta's sedimentary structure.

The subsidence of the delta plain is measured considering satellite-measured differential interferometry radar data (DInSAR). This data was obtained by Synthetic Aperture Radar (SAR) images and information available at the European Space Agency (ESA) archives, which are

ENVISAT satellite images, covering a period of ~18 years in 195 images

and ALOS satellite images, covering a period of ~4 years in only 12 images (not enough to obtain reliable results)

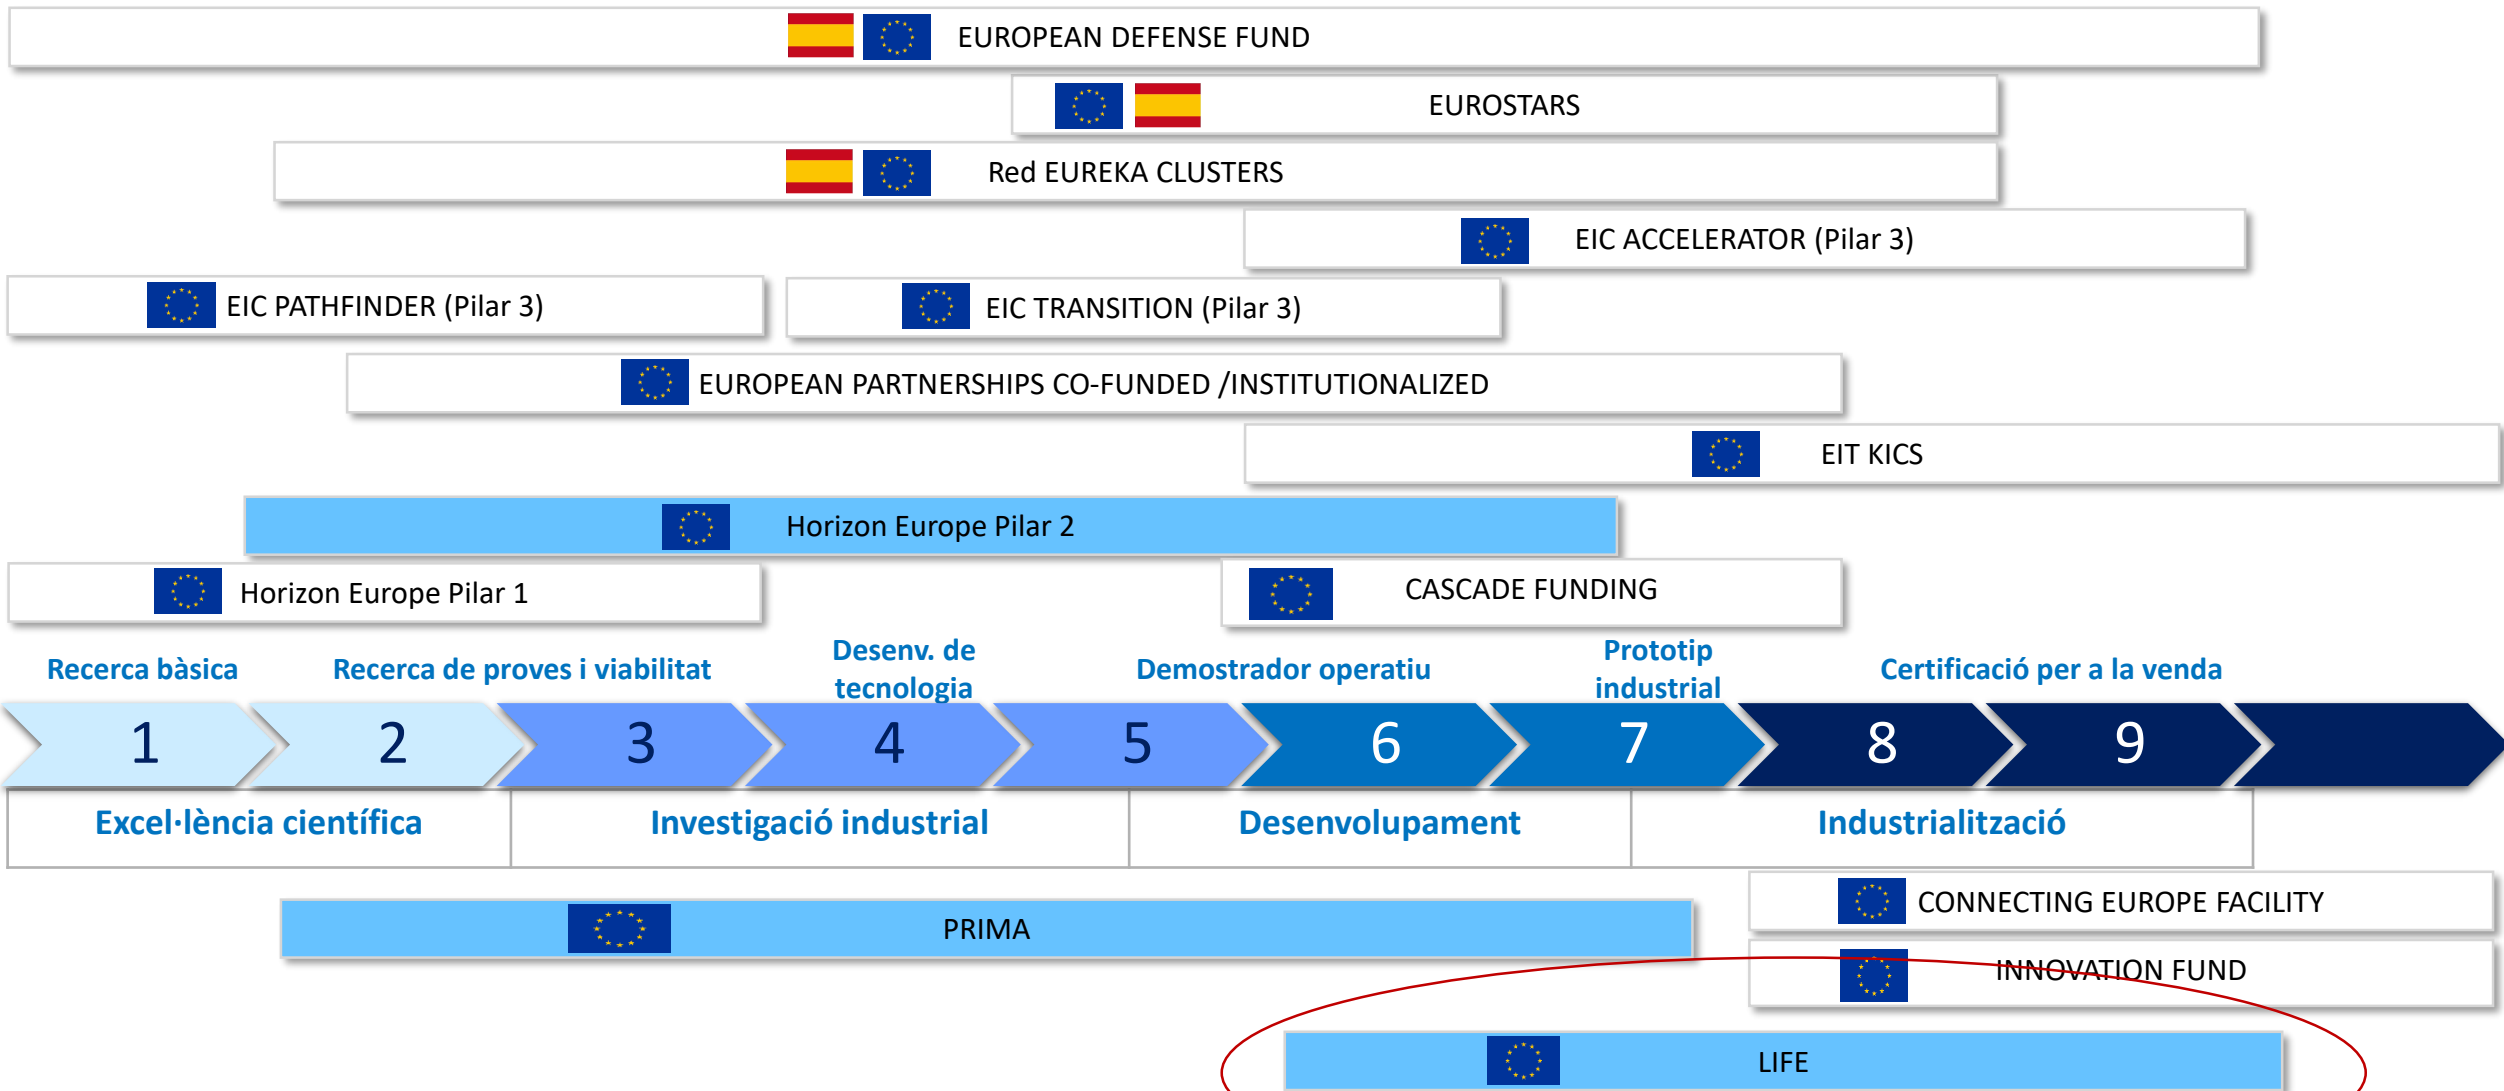

and by interpreting this data define a subsidence rate of the Ebro Delta plain between 1 and 3mm/year.

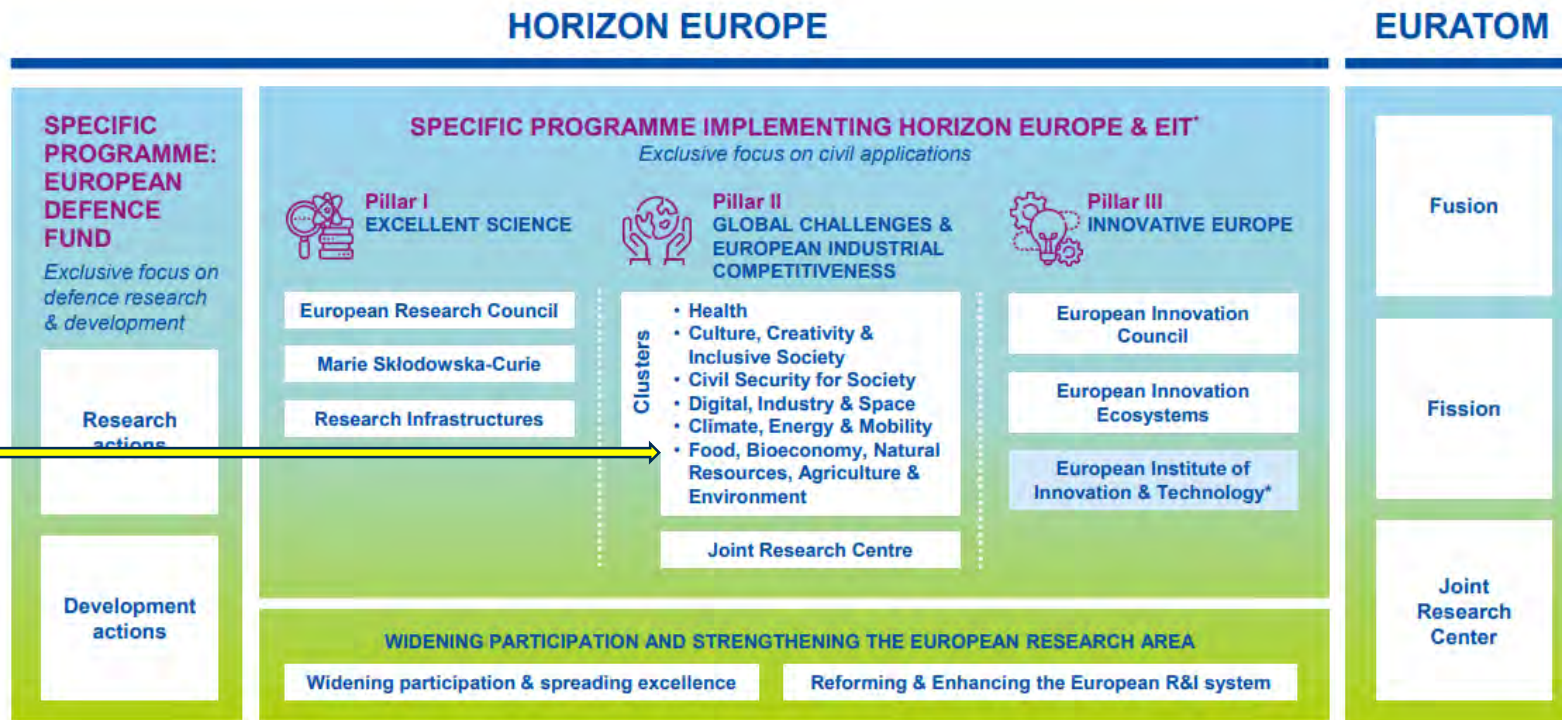

Vertical movements over Ebro Delta plain, measured through ERS and ENVISAT imagery. Negative values indicate subsidence

Horizon Europe - Partnerships

Circular Bio-based Europe

The mission of CBE JU is to advance a competitive bioeconomy for a sustainable Europe. To achieve this goal, in 2022, the public-private partnership will fund projects developing innovative and sustainable bio-based solutions, with a focus on these strategic priorities: feedstock, processing, products, as well as cross-cutting aspects of communication and environmental sustainability. These priorities are set in the CBE JU's Strategic Research and Innovation Agenda (SRIA) for the 2022-2030 period.

Call details

- Call identifier: **HORIZON-JTI-CBEJU-2022**
- Indicative call opening: **22 June 2022**
- Indicative call deadline: **22 September 2022 17:00 CET**
- Indicative budget: **€120 million**

CBE JU calls follow the rules and procedures of [Horizon Europe](#), the EU's research and innovation programme. Find [more information](#) about Horizon Europe's funding opportunities.

Welcome to

CBE JU networking platform

Are you considering applying for the CBE JU 2022 call for project proposals? Register on the platform to pitch your project idea, look for partners and offer your services, and, more importantly, get in touch with other CBE JU community members!
